Quality and Environmental Policy

Coromatic ensures data communication and power supply 24/7 in mission critical facilities by developing, servicing and operating robust physical infrastructure for data centers and critical power solutions.

We help to secure a resilient and sustainable society.

This policy sets the direction for decision-making and behavior within Coromatic and among its relevant stakeholders regarding quality and environmental initiatives, as part of Coromatic's overall sustainability agenda.

Coromatic has a management system that outlines our way of working and our commitment to secure qualitative and sustainable deliveries to our customers. Our management system covers all companies fully consolidated in the Coromatic group and all sites where these companies operate.

We work actively to meet customer needs and strive to exceed their expectations of the services provided, while conducting a sustainable business complying with laws and regulations. We keep mission critical infrastructure in operating condition, with a high level of service and availability provided by motivated and competent employees. This generates long-lasting customer relationships.

We strive for continual improvement of the management system and our deliveries to customers. Our employees are expected to actively contribute with their skills and dedication to deliver high quality services with low environmental impact, and to strive for continuous improvement throughout the business processes and during the whole product and services lifecycle.

We continuously pursue our efforts to reduce our environmental and climate impact through our own activities, and our use of products and services focusing on our significant environmental aspects:

- 1 Waste management
- 2 Transportation & logistics
- 3 Chemicals
- 4 Energy consumption

To provide quality workmanship, we ensure relevant training for our employees, and create clear business processes supported by policies, guidelines, instructions, templates, checklists and tools.
